Good evening,

The Pre-RD group has finished sampling ST07A (collected 1/29) and started processing ST06A. The group plans to sample ST06A after water has settled later this evening. ST06B will be processed tonight and sampled tomorrow at the warehouse. Included are photos of the sediment processing

Jonni

(b) (6)

Decanting water with sodium azide from tubes.

Sediment recovery depth is measured and characterized

Sediment is homogenized into steel bowl and remaining water is allowed settle out (container placed in the fridge for several hours)

Tubes are decontaminated
